Hi,

who can give me a detailed description of ROUTINE_NAMES?

I know myself two keywords:

/variables to show which variables are defined (inside and outside of the routine)

and

/fetch to get a variable from MAIN Level inside a procedure/function without declaration

```
pro test
    print,routine_names(/variables)
    print,routine_names('xx',/fetch)
end
```

```
xx=10
test
```

```
IDL> test
A CAT DCAT DD DDD FI X XX
 10
```
