Massimo -

You can use my POS_WIDGET.PRO routine to position a widget at:

(1) the center of the screen; (2) centered within a parent widget;
(3) to the right of a parent widget; or (4) "cascaded" relative
to a parent widget, offset in X and Y by a small amount. You can
call this before or after a widget has been realized.

You'll need to add a line like this inside a local copy of CW_FORM():

```
ret = POS_WIDGET(base)
```

to center the widget onscreen.

You can get POS_WIDGET.PRO at:

<ftp://bial8.ucsd.edu/pub/software/idl/share>
