Hi,

The longitude convention in IDL is from -180 W to +180 E. If I just want to plot a region +/- 10 degree longitude box around 180 meridian, how do I set the mapping properly?

I don't want the bigger portion of the earth (-170W all the way around 0 degree and then 170E), I just want the smaller portion (20 degree slice) of the earth.

thanks

JyL
