Dear all

Just if someone is interested: I once wrote a frontend to comfortably read/write/process binary files in the standard data format of SEISMIC UNIX, which is (almost) a SEG-Y format. (btw. SEISMIC UNIX is collection of seismic data processing programs freely available from www.cwp.mines.edu).

If someone is interested I am glad to post the data (no web site for the moment, but if someone wants to integrate this in her/his collection...). The programs are tested on PV-Wave but should (!!) also work on IDL.

Please feel free to contact me

Martin
