Hi folks,

I write a procedure which reads an image when a button pressed.

```
pro BTLoad_Event, event
  WIDGET_CONTROL, event.id, GET_UVALUE = info
  fname = DIALOG_PICKFILE(FILE = info.filename, /READ, FILTER = '*.hdr',
$                                /MUST_EXIST, /FIX_FILTER, PATH = path, /NOCONFIRM)
  IF fname NE "" THEN BEGIN
    Read_Analyze, fname, info.image
    ;~~~~~
  ENDIF
end
```

```
pro Read_Analyze, File, Image
;it reads some data from the file and modifies some fields in Image
end;
```

I see that in the Read_Analyze, data is read correctly, but in
BTLoad_Event, info.image is not modified. Anyone can tell me why ?

Best regards,
Tri.
