Hy object'lers,

I re-arranged code from the recent IDL distribution and
put it in some way together what we would think of a simple
atom/molecule demo..

IDL> .run cristal

IDL> cristal

be warned: have the examples directories of IDL also in
your searchable path because it uses surf_track.pro (wonderful app)
and orb__define.pro

(Oh' it doesn't work? feedback is appreciated and I will then
return code which should work...)
