Subject: File format question Posted by rarback on Mon, 20 Sep 1993 14:23:07 GMT View Forum Message <> Reply to Message

A colleague of mine has been generating IDL images which he now wants to read into some vendor's hardware. He recalls the hardware only accepts file formats of the following types:

.dxf (an AutoCAD standard)
.sgo (something to do with Silicon Graphics?)
.bin (???).

Does anyone know how to do this, either within IDL or some file conversion utility?

Thanks.
