Hi all;

I was trying to use Widget_Message (which I regularly use on a Solaris machine) to display some information for a program running IDL 5.2 for Macintosh. However, when I passed an array of strings, they didn't print one per line like they do on other platforms. Instead, they were concatenated together. Has anyone else seen this behavior?

Example:

Type the following at the IDL prompt:

```
ok = Widget_Message(['line one', 'line two'], /Information)
```

On Solaris and Windows, I get a dialog like this:

```
+-----+
|  Information  |
+-----+
|  line one    |
|  line two    |
|  +-----+   |
|  |  Ok  |   |
|  +-----+   |
+-----+
```

On the Mac, it looks more like this:

```
+-----+
|  Information  |
+-----+
| line one;½ line |
| two           |
|  +-----+   |
|  |  Ok  |   |
|  +-----+   |
+-----+
```

Why? Any ideas how to fix it?

Phillip
