Subject: Read DXF with IDL 5.2
Posted by thabermehl on Thu, 08 Apr 1999 07:00:00 GMT

Problems to read a DXF-File (Autocad 13 Format) in IDL

It is about 3D building data.

I tried to read it with the dxf_example program coming with IDL 5.2, but

I could see the entities in the menu, but the display stayed white.

CREASO support told me that it might be
a problem with the view-dimesion of the window and my data
and that I should
check the vertices and polygons and display it with POLYSHADE.

tip how I can read the view dimesion of my data and use it to print my
data in the IDL window, or how I can display it with POLYSHADE.
But which variable holds the DXF entities, to display with POLYSHADE?

Thanks for your help

T. Habermehl
