Hi, I'm new to IDL and I'm looking forward using Object Oriented programming under IDL. As far as I can see, IDL doesn't support internal method calling inside a class, am I right ? I mean, within class A, suppose we have method A::Init and then A::SetValue, how can (or is it simply possible) to call the A::SetValue method from A::Init ? I didn't find any way to do this yet.. Can someone help ? Thanks,

Jean-Francois Lavoie
