Hi, I'm new to IDL and I'm looking forward using Object Oriented programming
under IDL. As far as I can see, IDL doesn't support internal method calling
inside a class, am I right ? I mean, within class A, suppose we have method
A::Init and then A::SetValue, how can (or is it simply possible) to call the
A::SetValue method from A::Init ? I didn't find any way to do this yet..
Can someone help ? Thanks,

Jean-Francois Lavoie
