Hi,

I have a problem to manage the color tables on Mac0S 8.5 in the version 5.1 of IDL. I always have the default color table (linear) to display my images.

When I use the XLOADCT widget of IDL, I can't change anything the color tables is always the linear tables on Macintosh, but it works well on Unix.

Of course, I set my Macintosh to have million colors.

Somebody knows what's happens ?

Thank you.
