Must be something going around, because I just wrote an article
about this last week and posted it on my web page:

http://www.dfanning.com/tips/strange_tvrd.html

You don't have to be in 24-bit mode (at least in IDL
5.2), but you **DO** have to set the TRUE keyword both in
TVRD and on the TV command, and you DO have to have
Decomposed=1 when displaying a 24-bit image on a PC.

(I **really** think this last requirement is a bug, RSI.
Anyone listening?)

Cheers,

David
