A Wave question:

Does anyone know if it is possible to specify the size of images when using the CGM device? The size and position qualifiers, whether they are specified in normal, data or device coordinates of the TV command do not seem to work when using the CGM driver. For example, with a 512 x 512 image,

```
set_plot,'cgm'  
device,metafile_type='binary'  
tv,image,xsize=.5,ysize=.5,/normal
```

and

```
set_plot,'cgm'  
device,metafile_type='binary'  
tv,image,xsize=1000,ysize=1000,/device
```

Do not seem to produce different output.
Any suggestions?
