Subject: Help: antenna pattern plotting (polar plots)

Help! What I am trying to do is create an antenna pattern plot. This is
normally presented as a polar plot with r indicating field strength in
direction theta. I have used essentially the technique suggested by
David Fanning in his tips, but I have run into a problem:

I want my axes to be positive only. For example, I'd like the X axis to
show values: 40 30 20 10 0 10 20 30 40, or not show values left of the Y
axis.

Does anyone have an easy tip to do this? Or does anyone have code to
display antenna patterns?

Thanks,
Declan
