
Subject: Updates to QMS driver for VMS IDL V2?

Hope this isn't another FAQ, but does anyone have a QMS driver for IDL under VMS which does a good job of polygon filling? We've been able to kludge by plotting multiple USERSYM's with increasingly smaller radii, but there's got to be a better way.

We're using the default version of the QMS driver which comes with the IDL distribution, written by the folks at the MIT fusion lab.

As it stands now, our "fills" consist of multiple parallel horizontal lines which are separated widely enough to be bothersome.

Thanks,
