
Subject: IDL_RPCImportArray bug?

Does anyone else have problems in IDL v 5.2 doing a call
to IDL_RPCImportArray with IDL_TYP_BYTE?

I get the error

IDL_RPCImportArray: Unknown Type

even though the type *is* IDL_TYP_BYTE (==1). An analogous
call to IDL_RPCMakeArray works like a charm....:

```
IDL_RPCMakeArray(type,ndims,IDL_dim,IDL_ARR_INI_NOP,&pVa r);  
pVar = IDL_RPCImportArray(ndims,IDL_dim,type,ptr,IDL_free_cb_null);
```

The first one is ok, the second one gives the error.
