I am not a frequent reader of the bulletin board, so sorry if this was already noted. In the v5.2 for Windows, there is a bug in SLICER3 when trying to save as a TIFF.

at line 5019

```
TIFF_WRITE, tiffFile[0], PLANARCONFIG=2, $  
    RED=TEMPORARY[iR], GREEN=TEMPORARY[iG], BLUE=TEMPORARY[iB]
```

The brackets for TEMPORARY need to be parentheses so that TEMPORARY is treated as a function and not a variable.
