
Subject: /GET_FONTNAMES for X-windows

Has anyone been able to get the GET_CURRENT_FONT, GET_FONTNAMES and GET_FONTNUM keywords to the DEVICE command to work with X-windows? These are supposed to place info about the available X-windows fonts into output variables, but they don't seem to have any effect for us.

We are able to successfully use the FONT keyword to DEVICE to select different fonts, and we can use the Unix 'xlsfonts' or 'xfontsel' commands to view the available fonts. But we can't get the fontnames from within IDL.

We are running IDL V3.5 with Motif on both Sun 4.1.3 and Vax/Vms.

Thanks,
