I am trying to get started with widgets in Wave on SUN Sparc, with Openwindows 3.0, SUN OS 4.1.1. Could some kind person please help with the following problem:

When I try the simplest demo program (radiocb) in the 'Guide to Widget Toolbox', I get an error when I try to run wwinit. I have traced the problem to the fact that wwinit.pro does not compile - This is what I get whe I try to compile it :

```
=====
WAVE> .run wwinit

      shell=Wtlnit(appname,appclass,'-bg',bg,'-fg',fg,'-fn',fn,'-g ',geom, $
                                ^
% Only 7 subscripts allowed.
  At: /usr/pkg/pvi/wave/lib/std/motif/wwinit.pro, Line 68

      '-name',tlname,COLORS=clrs)
                                ^
% Syntax error.
=====
```

It seems maybe WAVE thinks that Wtlnit is an array, and does not know it's a widget toolbox function.

I have re-installed Wave 4.01 in case that was the problem, and followed the instructions in \$WAVE_DIR/Release_Notes.

I must be missing something. If anyone has any suggestions as to how this may be overcome, please let me know.
Thanks.

Roger Fulton.
