Subject: IDL projection Transformation
Posted by Richard Kidd on Tue, 01 Jun 1999 07:00:00 GMT

Dear All,

I would like to implement a series of projection transformation routines (i.e basic Geo Lat
Long to a National (UTM like) projection) for coordinate pairs. There is a C library
(general cartographic transformation package) GCTP available from the United States
Geological Service (USGS), this seems to be the standard routines for projection
transformations. By any chance does anyone know if these routines have been converted
to IDL, and if so are they available........
Thanks for your thoughts.
Rich.
