Subject: axis: color and fonts - how to change it?
Posted by Harald von der Osten- on Wed, 09 Jun 1999 07:00:00 GMT

Hi,

becasue I need a white background for a shade_surface-plot I have to change
the color of the axis to black. How can I do this? I wasn't successful with
setting the !P.Color, neither with something like

tvlct, 0,0,0,1

..., color=1

And there is no reaction in setting !P.FONT to zero, or to 1 or to... Isn't
it possible to change the axis' fonts?

I am working on a 24bit display.

Thank you for every hint!!!!!

Good night from rainy Germany,

Harald
