hi all...

i start to develop satellite images using hough transform, straight line
detection technique.

i applied hough transform techinque like forrow skill
        $y = ax + b$ -------(1)
i found that this formula has inefficiency, such as higher error rate
and larger computing power etc..
so,
i will apply follow formula
        $x\cos? + y\sin? = r$ ------(2)

above two formular is hough transform technique...

i want toclips source that is formular (2) applied...

help me please......

Good luck..
