Hi all,

Does anybody know of a way to open and read a PCI (*.pix) file in ENVI
using (non-interactive) batch routines? I know you can open them from
the ENVI menu, but we want to set up automatic routines to do image
processing at night while we're not here. Is this even possible? If i
use the ENVI_OPEN_FILE routine i immediately get the edit header
dialogue.

Any help is welcome.

Thanks,

Jeff Nettles
