Has *anyone* successfully installed IDL onto a RH6.0 distribution....if so; How? I'm getting some problems:

```
/usr/local/rsi/idl_5.2/bin/bin.linux/idl: error in
loading shared libraries: ./libidl.so.5.0:
undefined symbol: __setfpucw
```

I suspect that this is due to the upgraded glibc.

Any help would be appreciated,
Cheers,
Mart
