Hi all,

I am a newbie in IDL. I have IDL 5.01 student Version on my SuSE linux 5.3 and I have a problem with making plots. When I start IDL, I get the "IDL Development Window". But when I try to practice and play with the syntax, I get the following error for making plots:

```
IDL> num =FLTARR(40)
IDL> line=SIN(num*!DTOR)
IDL> Plot, line
% Unsupported X Windows visual (class: StaticGray, depth: 0).
  Substituting default (class: <UndefinedVisual>, Depth: 0).
% Execution halted at: $MAIN$
```

I have no problem with GUI stuff in any other application on my machine.

Does anyone know what could be wrong?

Many Thanks,
