I tried to install IDL 5.2 (the demo-version) on a PC with Linux RedHat 6.0

After I ran the installation without getting any error message, I was unable to start IDL. I got the following message:

```
IDL Version 5.2 (linux x86). Research Systems, Inc.  
% Unable to open validation file: /usr/local/rsi/idl_5.2/idl.genver.  
No such file or directory  
% Entering timed demo mode for IDL. Each session is limited to 7 minutes  
of operation. Printing and file saving is disabled.
```

Contact your sales representative or Research Systems (303-786-9900, info@rsinc.com) if you are interested in evaluating a fully-functional version of this product.

For basic information, enter "IDLInfo" at the IDL> prompt.

```
/usr/local/rsi/idl_5.2/bin/bin.linux/idl: error in loading shared  
libraries: /usr/local/rsi/idl_5.2/bin/bin.linux/libidl.so.5.0: undefined  
symbol: __setfpucw
```

Although this is probably to be solved by the RSI support, I would be grateful for any help.

Thanks,
