Answer to my own question suddenly came in the form of an upgrade to IDL
5.2.1. The "feature" I brought to your attention in the original posting
is not showing in 5.2.1 - the code is absolutely the same. I like this.
Also they promised that postscript file size will in 5.2.1 be 1/4 of what
it was before when priniting object graphics. David, this way I may save
my lazy butt from writing direct graphics objects, do you think? :-)
Cheers,
Pavel
