Research Systems, Inc. is working to resolve issues related to running IDL under RedHat 6.0.

As many of you know there are changes under this latest Linux release which create technical challenges for software applications. Many of the system libraries on which RedHat 6.0 was built and on which IDL depends were changed.

Within the next two to three weeks, we hope to have a version of IDL available which will resolve the issues related to RedHat 6.0. In the mean time, we appreciate your understanding and patience.

Mark Goosman
