---

I have to add, that's the routine also crashes idl if I don't use a startup file.

Instead of a startup file I include the commands into the routine.

```
PRO ncdf_error2
```

```
; One following three commands will crash idl using aix IDL 5.2.1
```

```
window,0,xsize=100,ysize=100,color=256
```

```
device,decomposed=0
```

```
widget_control,default_font='-adobe-helvetica-medium-r-normal--12-*-*-*-*60-*-*'
```

```
; -----
```

```
FOR ii=0,200 DO BEGIN  
  PRINT,ii  
  FOR i=1,30 DO BEGIN  
    cdfid = NCDF_OPEN('ncdf_error.nc',/NOWRITE) ; OPEN the file  
    NCDF_CLOSE,cdfid  
  ENDFOR  
ENDFOR  
END
```

Who don't have already a netCDF File should try the example routine `ncdf_rdwr` from the examples/misc/sdf directory.

Regards

R.Bauer
