Subject: deleting compiled module ?
Posted by doll on Thu, 17 Feb 1994 12:28:14 GMT

hi there,

I'm just testing idl and I've got the following problem:
I genarated a module, started IDL and run that module.
I modified that module outside IDL, but to recompile and run the modified module I had to stop IDL and start it again.
[Q]: is there a possibility to delete or unload a compiled module for starting a modified version?

thanx alot

Franz Dollinger
