Subject: 2D DWT Multiresolution decomposition
Posted by raudipaul on Thu, 05 Aug 1999 07:00:00 GMT

I was wondering if there is any code for doing a 2D DWT decompositions
with octave filter banks out there. I notice that Amara's Wavelet
Workbench has such a program for the 1-D case, but not the 2D case. Is
there any such software out there?

Thanks,
Paul
