Hi All,

I am trying to plot a graph in color. However I only want the plot itself to be in color.

I tried using the command

```
idl>tv!ct, 255,0,0,10
```

```
idl>Plot, XVector, Yvector, color = 10, Title = 'Graph 1:', XTitle='Time  
(Years)', YTitle = 'Data'
```

However the axis labels also are displayed in red. Is there a way to JUST display the graph in red, and have the axis labels display in the default white color?

Thanks

Anil

P.S.:please reply to my email address.
