Subject: transfering data files
Posted by Kenneth Mankoff on Mon, 09 Aug 1999 07:00:00 GMT

Hi everyone,
   I need to transfer idl ".dat" files between computers. One is a Sun
running solaris, the other is a Dell laptop running Linux. The sun has
IDL5.2, Linux is running IDL5.1. The files are corrupted when transfered,
unless i copy them to .sav files. Is there any way around this?

thanks,
   ken.
