An interesting idea, Stein Vidar, but the thought of editing journal commands leaves me cold for some reason. Perhaps there is ample room here for two approaches to the same problem. :-)

I am thinking along the lines of a more powerful XWindow program, but object based. And as a matter of fact, I have the basic idea working (i.e., a program that takes and displays an unlimited number of commands) in just a little over an hour of programming last night when I got back from referee training. (This is why I LOVE objects!) Now it is just a matter of fleshing it out and adding the error checking and documentation. Should be ready by the first of the year. :-)

Ah, I wondered what had become of you lately. I've missed you. Well, good writing! :-)

- > So, when will we see it, David :-)

Soon, I believe. Real soon. Get your checkbooks ready. :-)

Cheers,

David
