Research Systems is proud to announce that ENVI 3.2 is now shipping. All
customers with current maintenance contracts should be receiving their
copies shortly.

ENVI (the Environment for Visualizing Images) is a remote sensing image
processing package, with industry leading hyperspectral capabilties.
New features in ENVI 3.2 include support for linking directly to GPS
devices, calibration algorithms for thermal infrared data, a utility for
replacing bad values in DEM data, and support for CIB and CADRG formats.
