Subject: Color Conversion question Posted by wbiagiot on Fri, 27 Aug 1999 07:00:00 GMT View Forum Message <> Reply to Message

This might be slightly esoteric, but here goes.

If the bytscl operation is applied to an RGB image, are subsequent color convertions (i.e. RGB to HLS/HSV) still valid or has the relationship been made invalid by the scaling? I will probably just remove the scaling and compare the conversions to test, but if anyone knows some color theory, please respond.

Much thanks in advance,

Bill B.
