
Subject: IDL Graphics Devices ?

I'd like to insert some IDL(v5.1) SURFACE-, SHADE_SURF-plots in a publication. The pictures of the PLOT procedure I grab using the PCL graphic output, but this doesn't if there are different grey-levels(p.e. 8 bit).

So I wonder if there is an elegant way to gain pictures in current picture formats(bmp, gif,...) of the IDL SURFACE-, SHADE_SURF-plots, avoiding PS-format or screenshots ?

Thank you for any hint!

Cheers

Andreas
