Anybody have input on how to put the xtitle,ytitle, and title in a place other than interfering (axis labels covering/intersecting with the titles) with the axes from PLOT_3D?

Should I forego the direct keywords and use xyouts?

The code:

```
Plot_3DBox,stormstructure.lono,$
stormstructure.lata,$
stormstructure.p,$
xrange=[min(stormstructure.lono),max(stormstructure.lono)],$
yrange=[min(stormstructure.lata),max(stormstructure.lata)],$
xtitle='Longitude',ytitle='Latitude',color=0,$
title='Dropwindsonde location thru Descent',$
zrange=[1050,500],zstyle=1
```

Thanks for the help!
