To change the cursor in IDL to a bitmap, look at the keywords
to "device,..." in the X windows section of Chapter 3 of the
IDL reference guide. You can set the cursor to a bitmap you
provide.

I suppose you could write your own X routines to be called by
IDL to avoid using IDL widgets, but I like widgets because
IDL on any machine (Unix/X, VMS/X, Dos/Windows, Mac) has
widget calls which look the same.
