I tried using Annotate.pro to dump some annotations to a .ps file. But after a carefull reading of the instructions, all I got was an empty page.

Am I the only one coming up empty handed ?

(this is on idl5.2 on nt4). Btw, the code also bombed because my !d.n_colors=16777216 was much larger than the color index array it was using. Thus I had to do some hacking (use 256 instead of !d.n_colors).

(the other) Mirko
