As others of have pointed out, you haven't given us enough
information to make a complete answer.

If you run on Unix, consider my one-button print solution under
X-windows, called XFWINDOW. Unlike the screen-dump solutions,
XFWINDOW preserves the graphics commands precisely as you type them,
so the output comes with full fidelity. It is included in the
xfilter-0.6 package, available from this web page:

http://cow.physics.wisc.edu/~craigm/idl/idl.html

Be sure to download xfilter-0.6.tar.gz. XWINDOW (without the "F") is
a different program from XFWINDOW (with the "F"). Full documentation
is included in 00README. Soon I will have a new version which
simplifies installation even more.

If there are any IDL folks out there experienced in compiling DLM's
for IBM or HP unix machines, please let me know. I would like to get
these working as well. Or download the source and take a look at it.
It's tricky, so feel free to contact me.

Thanks,
Craig
