Subject: IDL language mode for nedit

Posted by Octavi Fors on Thu, 07 Oct 1999 07:00:00 GMT

Hello everybody,

Nedit is a nice editor developed in FermiLab. I'm using it for writing
IDL programs. I've seen it has several languages modes (C, C++, FORTRAN,
LATEX, etc...) to highlight text. Unfortunately there's no IDL mode.

Does anybody know any IDL-language-mode patch?

Thanks in advance,

Octavi Fors.
