
Subject: PICKFILE core dumps when called by widgets program -- any advise?

I have an IDL program that builds several widgets. I want to click on a button and have "PICKFILE" come up. It comes up fine, but when I go to close it, in the process of executing "WIDGET_CONTROL, event.top, /DESTROY" it coredumps with a segmentation error (IBM AIX 3.2.5).

I can always load PICKFILE from the command line, but when I load it from a program that already has XMANAGER and a bunch of widgets, I get this behavior.

I'm running my programs with the command "/local/lib/idl/bin/idl run.pro" where "run.pro" is a simple program that looks like this:

```
.run spread
spread
a=get_kbrd(1)
exit
```

"spread" is the program that actually creates all of my widgets -- it is similar in structure to "XNOTHING".

Any advise?

Thanks in advance.
