First off, thanks to David and Pavel for their insights. Before I could check the newsgroup for replies, one of our younger go-getter science types came and told me something about object oriented programming that made good sense:

The data should be an attribute of the object, not the object itself.

Hmm. Anyway, he and I sat down for about 15 minutes and came up with the following class structure definition and cleanup method:

PRO nasti__define

```
; -- Define the NAMED data structure attribute
```

```
data = { data, $
    wavenumber    : PTR_NEW(), $
    radiance      : PTR_NEW(), $
    altitude      : PTR_NEW(), $
    fov_angle     : PTR_NEW(), $
    fov_index     : PTR_NEW(), $
    latitude      : PTR_NEW(), $
    longitude     : PTR_NEW(), $
    aircraft_roll : PTR_NEW(), $
    aircraft_pitch : PTR_NEW(), $
    scan_line_index : PTR_NEW(), $
    date          : PTR_NEW(), $
    time          : PTR_NEW(), $
    decimal_time  : PTR_NEW() }
```

```
; -- Create object CLASS structure
```

```
nasti = { nasti, $
    data : data }
```

END

I like this because now I can add additional attributes whenever I want, e.g. global attribute data read from the netCDF data file containing instrument calibration information and/or processing software CVS/RCS info etc.

The cleanup method is now:

PRO nasti::cleanup

```
PRINT, FORMAT = '( /5x, "Clean up..." )'
```

```
; -- Free up pointers
```

```
n_data_fields = N_TAGS( self.data )
FOR i = 0, n_data_fields - 1 DO $
  IF ( PTR_VALID( self.data.(i) ) ) THEN $
    PTR_FREE, self.data.(i)
```

END

I just couldn't bring myself to typing PTR_FREE, self.whatever a bunch of times because if I ever change the data structure definition, I would have to change the cleanup as well. I like changes in my code to have as small a footprint as possible, i.e. change is required in as few places as possible. Dunno if that's a great idea but for my simple little example but it's a start. Right?

I wish I'd "discovered" objects earlier.....all that code I wrote that *needs* the data to be encapsulated. Crikey.

Thanks again!

paulv
