Subject: IDL-C-Fortran

Posted by pei zeng on Fri, 22 Oct 1999 07:00:00 GMT

Hi:

We have a large Fortran program and we are building an IDL GUI. We would
like to call fortran from a C wrapper(called by IDL). The application will
be used in different platforms(UNIX/windows). I have successfully built a
DLL only calling C on NT, but having troubles to do so for mixed language.
Any suggestions?

Thanks a lot.

Pei
