Subject: saving plots as .eps

Posted by Dave Avis on Tue, 19 Oct 1999 07:00:00 GMT

I am trying to save a 2D scatter plot as a .eps file. My plot is a plot of
two vectors, for example

plot xvector,yvector

I have looked at online examples and printed documentation and am still
having problems. I do

set_plot 'ps'
device,/ENCAPSULATED ;followed by other stuff

My problem comes when trying to use TV or any of its other incarnations
(TVSCL, TVRD...). It seems to me that they want a 2D array of the pixel
values of the plot window. I am not sure how to get this array. I may be
misunderstanding what TV is trying to do, or I may be going about it the
wrong way, I'm not sure. Any help is most appreciated.

Thanks,
Dave
