Subject: change widget slider maximum dynamically?

Hi,

No doubt someone has probably figured this one out some time ago. However can anyone help me with using the widget slider control? In particular I would like to be able to set the maximum value of the widget slider dynamically (i.e. after the slider has been realized). I would like to set the maximum value of the slider at the conclusion of reading in a data set. Since a new data set may contain a different number of "groups" then the first one then it would be ideal to simply update the maximum in the slider.

Thanks in advance!

Rob
