I got tired about these "Your program has an arithmetic underflow"-messages and reported them to RSI.
They will remove them from version 5.3.

You can see this error message by writing

```
a=fft(shift(complexarr(128),0))
```

The message is complete nonsense. Try writing this procedure:

```
pro t
  a=complexarr(128)
  a=shift(a,0)
  a=fft(a)
end
```

It will produce the same underflow error.

Now run it by typing it one line at a time.
Voila! No error message.
