## Subject: Q: Given many images, find biggerest bounding box
Posted by hhpt on Fri, 05 Nov 1999 08:00:00 GMT

I have many spatially seperated (but maybe overlapped) images patches
which I would like to make a big mosaic image with them.

For each of the patch, I have the coor. (lat, lon) of the upper left
hand corner and the # of rows and # of cols.  I would like to find the
biggerest bounding box that will contain all the patches.

Can anyone point me to any existing algorithm that will find this
bounding box?
